

Chapter 12 - Evading IDS, Firewalls and Honeypots

Snort:

```
sudo apt install snort
sudo pluma /etc/snort/snort.conf
at line no 65 replace "any" with "parrotip"
at line no 629 remove # in front of the line and then save the file
sudo snort -q -A console -c /etc/snort/snort.conf
```

Now go to your windows machine and perform ping on parrot machine

IPTables Firewall:

First start services in your parrot machine:

```
sudo service apache2 start
sudo service ssh start
```

To allow traffic on localhost:

```
sudo iptables -I INPUT -i lo -j ACCEPT
```

how to block icmp traffic:

```
sudo iptables -I INPUT -p icmp --icmp-type echo-request -j DROP
```

How to block outgoing Traffic:

```
sudo iptables -I OUTPUT -p tcp -d twitter.com --dport 80 -j DROP
sudo iptables -I OUTPUT -p tcp -d twitter.com --dport 443 -j DROP
```

how to block traffic for particular port services

```
sudo iptables -I INPUT -p tcp --dport 22 -j DROP
```

If you want allow a machine for port 22 :

```
sudo iptables -I INPUT -p tcp --dport 22 -s 192.168.29.26 -j ACCEPT
```

If you want to allow a machine for all the packets:

```
sudo iptables -I INPUT -s 192.168.1.3 -j ACCEPT
```

how to block traffic for particular ip address:

```
sudo iptables -I INPUT -s 192.168.1.3 -j DROP
```

how to block traffic for range of ip address:

```
sudo iptables -I INPUT -m iprange --src-range 192.168.1.100-192.168.1.200 -j DROP
```

If you want to remove all rules and start with a clean slate:

```
sudo iptables -F
```

To see the list of rules we have assigned:

```
sudo iptables -L --line-numbers
```

To delete particular chain:

```
sudo iptables -D INPUT
```

To block with the length of packet:

Size of the packets when we perform nmap scan's:

tcp connect=60, tcp syn= 44, Anyinverse scan= 40

Command to block tcp connect scan with packet length:

```
iptables -I INPUT -p tcp -m length --length 60 -j REJECT --reject-with tcp-reset
```

To bypass the rules :

```
nmap --help
```

```
sudo nmap -sS --data-length 53
```

```
sudo nmap -sX --data-length 25
```
